Product reliability is essential for success, and Accelerated Life Testing makes it possible to answer these questions before your launch. This process accelerates testing by increasing stress on a device to induce and accumulate damage faster than in the field. From there, you can better understand the cause of the failure.

Accelerated Life Testing | Ansys

Accelerated life testing is the process of testing a product by subjecting it to conditions (stress, strain, temperatures, voltage, vibration rate, pressure etc.) in excess of its normal service parameters in an effort to uncover faults and potential modes of failure in a short amount of time. By analyzing the product's response to such tests, engineers can make predictions about the service ...
