developed in the 1950s by the American educational psychologist Benjamin Bloom, which fostered a common vocabulary for thinking about learning goals. Bloom's taxonomy engendered a way to align educational goals, curricula, and assessments that are used in schools, and it structured the breadth and depth of the instructional activities and curriculum that teachers provide for students.

Bloom's taxonomy | education | Britannica

Bloom's Taxonomy is a classification of the different objectives and skills that educators set for their students (learning objectives). The taxonomy was proposed in 1956 by Benjamin Bloom, an educational psychologist at the University of Chicago. The terminology has been recently updated to include the following six levels of learning.

Bloom's taxonomy is a set of three hierarchical models used to classify educational learning objectives into levels of complexity and specificity. The three lists cover the learning objectives in cognitive, affective and sensory domains. The cognitive domain list has been the primary focus of most traditional education and is frequently used to structure curriculum learning objectives, assessments and activities.

Bloom's taxonomy - Wikipedia

One of the approaches to delivering the right training is by applying Bloom's Taxonomy to eLearning. Bloom's Taxonomy is an old concept that has been in existence since 1956 and has been used for traditional classroom training. However, it was revised in 2001 in order to meet the modern approach to learning. One of the roles of Bloom's Taxonomy ...
