I was always curious why women tend to learn and recuperate after strokes better, and faster then men. The reason is a certain band, located in the forehead region,that connects the left side of the brain to the right side. It is larger in women than in men and enables women to learn faster when in rehabilitation.

Lateralization may differ between the sexes, with men often being said to have a more lateralized brain. This is often attributed to differences in "left-" and "right-" brained abilities. One factor that contributes support to the idea that there is a sex difference in brain lateralization is that men are more likely to be left-handed.

Neuroscience of sex differences - Wikipedia

Brain Sex argues that men and women are different biologically. The authors debate that the brain is constructed differently in men and women, resulting in different perceptions, priorities and behaviors. Brain Sex explores the power that men and women have. It explains that men's power traditionally stems from dominance and aggression.
