Project Tye. Project Tye is an experimental developer tool that makes developing, testing, and deploying microservices and distributed applications easier.. When building an app made up of multiple projects, you often want to run more than one at a time, such as a website that communicates with a backend API or several services all communicating with each other.

For a long time Microsoft pushed Office adoption by forcing the “viewer” to have licenses to access the data. That’s why a company would buy Office for every single employee. But now, you can have Office for the “20” part, and have them push their result to Notion for everyone else to view, do simple things with it.

Go to Microsoft Flow. flow.microsoft.com, and create a new, blank Flow. Your trigger can be whatever you’d like it to be, but for this simple example, I’ll use a manual trigger, a button. In your manual trigger, create input parameters for each of the values you’re using in the document as quick parts. Again, this is a simple example.
