Coral reefs are made up from coral (which itself is an animal), that exists with other animals such as sponges and sea slugs. There are two main types of coral reef habitat which are hard coral reefs and soft coral reefs. Soft corals are individual animals (known as polyps) which move through the waters, and eventually settle.

Wikipedia

Due to the complex structures of coral reefs, with their many nooks, crannies, and hiding spaces, fish have adapted a body structure to easily maneuver through the coral. In open water fish have adapted bodies to swim faster, but within the coral reefs fish have adapted bodies that are flat (like a pancake) and maneuverable.
