Electrical Engineering Experiments | Ohio University

Op-amps require dual-polarity supply for proper operation.

When working with battery supply, it becomes difficult to get dual power supply for the op-amps.

Presented here is a simple circuit that

and computers.

Engineers have to use certain materials to make electrical devices work. In this experiment, you will find out which materials let electricity flow through them (conductors) and which ones prevent electricity from flowing through them (insulators).

You can easily add a variable component to the project to make it a true experiment. For example, kids can test whether there is as much static electricity on a dry day as on a humid day. Kids can test different materials to see what conducts electricity, etc.
