The quality of mixing depends on the effective energy input by unit mass or unit volume of fluid. It has been found, for example, that the rate of oxygen transfer in aerated fermentors equipped with turbine mixers is nearly proportional to the net mixing power input per unit volume of broth (Hixson and Gaden, 1950).The relationship between mixing power and the type, dimensions and operation ...

Neurons are permanent cells whose key feature is information transmission via chemical and electrical signals. Therefore, a finely tuned homeostasis is necessary to maintain function and preserve neuronal lifelong survival. The cytoskeleton, and in particular microtubules, are far from being inert actors in the maintenance of this complex cellular equilibrium, and they participate in the ...

2.2 Transitional Climate Zone (TCZ) Early in the 1980s, Fu and colleagues raised the issue of the regionality of global change [Fu, 1989] and showed that certain regions are more sensitive to both natural and anthropogenic forcings, such as the transitional zones of climates and ecosystems.These regions are characterized by their instability, which is related to strong gradients of climate and ...
