Food Microbiology: An Introduction by Thomas J. Montville

Food microbiology is the branch of microbiology that deals with methods for keeping microorganisms (especially food-borne pathogens and spoilage microbes) from growing in food during handling, processing and storage. In food microbiology, microbes that are of importance in food production are studied by food microbiologists; and those pathogens that cause food borne diseases and food intoxications or food poisoning in humans are covered under this broad topic known as food microbiology.

Yeasts and molds grow on most foods, on equipment, and building surfaces where there are small amounts of nutrient and moisture. Since bacteria grow faster, they greatly outnumber yeasts and molds in most foods. However, bacteria find conditions of low pH, moisture, or temperature and high salt or sugar unfavorable.
