The coordination game is a classic two-player, two-strategy game, as shown in the example payoff matrix to the right. There are two pure-strategy equilibria, (A,A) with payoff 4 for each player and (B,B) with payoff 2 for each. The combination (B,B) is a Nash equilibrium because if either player unilaterally changes his strategy from B to A, his payoff will fall from 2 to 1.

Nash equilibrium - Wikipedia

In mathematics, graph theory is the study of graphs, which are mathematical structures used to model pairwise relations between objects. A graph in this context is made up of vertices (also called nodes or points) which are connected by edges (also called links or lines). A distinction is made between undirected graphs, where edges link two vertices symmetrically, and directed graphs, where ...

A Social Neuroscience Perspective on Adolescent Risk-Taking

The HBM is the first theory that was developed exclusively to explain health-related behaviors. As one of the oldest and the most widely used theories of health behavior (Glanz and Lewis, 2002; National Cancer Institute, 2003), it is regarded as the origin of systematic and theory-based research in health behavior (Hochbaum, 1992; Kharrazi, 2009).
