Hydraulic Elevators are lift systems that use a hydraulic piston to raise and lower the elevator car. Hydraulic Elevators are typically used for low and mid-rise buildings and have a hydraulic piston below the elevator pit. The hydraulic piston sheave and cylinder is located below the elevator pit and must be at least the overall rise plus 4'-7' (1.2-2.1 m).

Rotary Lift | Setting the standard for hydraulic vehicle lifts

Examples of the types of lifts available, including boom, scissor, and vertical mast lifts. Image Credit: WINS86/Shutterstock.com. Pneumatic and hydraulic lifts are two types of lifts that are widely used throughout industry due to their high load capacities, large extension ranges, and environmental versatility.

Understanding Pneumatic and Hydraulic Lifts

Hydraulic lifts work on a basic principle: to go up, a pump pushes oil into the cylinder, pushing the piston (which pushes the lift car) up. To go down, the valve opens and oil is allowed to flow back into the reservoir, and is pushed back using the gravitational force of the lift car. The diagram above shows this system. When the valve is closed, the oil can only go from the reservoir into ...
