What Tests to Take/KATEs

The modern air conditioning system cools an indoor space by using the refrigeration cycle. This refrigeration cycle works by controlling the level of energy in the system's refrigerant: Some parts of the system have energy-packed refrigerant that is ready to release heat, whereas other parts have energy-depleted refrigerant that is ready to absorb heat.

A Simple Guide to the Refrigeration Cycle and How Air Conditioners Work ...

By providing a climate-controlled environment, refrigeration systems make it possible to store and transport food, medicine, and other perishable items. Some HVACR technicians specialize in one or more specific aspects of HVACR, such as radiant heating systems, solar panels, testing and balancing, or commercial refrigeration.
