software addresses this problem by allowing architects to specify relationships among various parameters of their design model. The advantage is that a designer can then change a few parameters and the remainder of the model will react and update accordingly and in a consistent manner based on the pre-set associative rules.

Parametric design lets you specify the key parameters of your project and make changes interactively, with the model updating automatically. It can be used for architectural showmanship but I believe good engineers will use it to make more efficient designs, explore more options, and optimise buildings.
