Following @Vanadium 50 's suggestion, you could use a slightly out of order sequence.... and you might be able to get a custom-published sequence from the publisher. Of course, (although it would be a lot of work) you could develop your own materials, customized to your constraints. You start with your own "C&J supplements for Calculus-based students".

We envision utilizing the versatility of a Computer Algebra System, specifically Mathematica to explore designing physics problems. As a focused project, we consider for instance a thermo-mechanical-physics problem showing its development from the ground up. Following the objectives of this investigation first by applying the fundamentals of physics principles we solve the problem symbolically.

In physics, a force is an influence that can change the motion of an object. A force can cause an object with mass to change its velocity (e.g. moving from a state of rest), i.e., to accelerate. Force can also be described intuitively as a push or a pull. A force has both magnitude and direction, making it a vector quantity. It is measured in the SI unit of newton (N).
