In geometry, you may be given specific information about a triangle and in turn be asked to prove something specific about it. The following example requires that you use the SAS property to prove that a triangle is congruent. Practice questions Use the following figure to answer each question. Given bisect each other at B. [...]

Possible answer: The Substitution Property states that if $a = b$, then b can be substituted for a in any expression. Applying the Symmetric Property to the Substitution Property shows that if $b = a$, then a can be substituted for b in any expression. So if $a = b$ and $b = c$, then $a = c$ by the Substitution Property, and this is also the Transitive Property.
