Students

dedicated to the study of human tooth structures. The development, appearance, and classification of teeth fall within its purview. (The function of teeth as they contact one another falls elsewhere, under dental occlusion.) Tooth formation begins before birth, and the teeth's eventual morphology is dictated during this time.

The 'Dental Anatomy'
quiz: Our intermediate-
level tooth and dental
anatomy quiz. A) Tooth
Root - That portion of a
tooth that is embedded
in the jawbone.

Individual types of
teeth characteristically
have 1, 2, or 3 roots.

Online Library Special Or Dental

Individual roots can be distinct or fused with others.

Primary Taste
Sensations. As
previously mentioned,
five different taste
sensations are
currently recognized.

Online Library Special Or Dental

The first, salty, is simply the sense of Na^+ concentration in the saliva. As the Na^+ concentration becomes high outside the taste cells, a strong concentration gradient drives their diffusion into the cells. This depolarizes the cells, leading them to release neurotransmitter.

Special Senses: Taste (Gustation) |
