## Hardy-Weinberg principle | Bartleby

Hardy-Weinberg principle - principle stating that the proportions of different alleles and genotypes in a population will remain stable as long as certain conditions are met. The Hardy-Weinberg principle applies to large populations in which mating is random, there is no migration, no mutations are occurring, and natural selection is not occurring for the alleles in question.

Question: How can you determine if a population is in Hardy-Weinberg equilibrium? Manipulate: The Hardy-Weinberg equation is  $p^2 + 2pq + q^2 = 1$ , where  $p$  = probability of D,  $q$  = probability of d,  $p^2$  = probability of DD,  $2pq$  = probability of Dd, and  $q^2$  = probability of dd. Look under Show Hardy-Weinberg quantities.
