## **Conjoint Analysis - statmath.wu-wien.ac.at**

Cluster analysis is a statistical method for processing data. It works by organizing items into groups, or clusters, on the basis of how closely associated they are. Cluster analysis, like reduced space analysis (factor analysis), is concerned with data matrices in which the variables have not been partitioned beforehand into criterion versus ...

Cluster Algorithm in agglomerative hierarchical clustering methods - seven steps to get clusters

1. each object is a independent cluster,  $n$
2. two clusters with the lowest distance are merged to one cluster. reduce the number of clusters by 1 ( $n-1$ )
3. calculate the the distance matrix between the new cluster and all remaining clusters
4. repeat step 2 and 3, ( $n-1$ ) times until all objects form one reminding cluster
