## **What's in Your Genes?: From The Color Of Your Eyes To The ...**

When someone tells you, “It’s in your genes,” they’re saying that the part of your chromosome responsible for your quirk matches that part of the chromosome on your equally quirky parent. Except when it doesn’t. Imagine two mice. One looks normal. It’s tiny and brown. The other is fat and has orange fur.

## **What's on your genes? | Science News for Students**

That genetic makeup is a combination of what was inherited from each parent. Genes encode for proteins, the building blocks for everything in our body, and give specific instructions on how cells should operate, divide, etc. Each gene has a specific function and most functions in our body rely on multiple genes to work.

Traits – the genetics behind your appearance and senses, such as freckles, cheek dimples, eye color, fear of heights, bitter taste, motion ...

## **What's In Your Genes? Health Information From DNA Tests ...**

DNA (deoxyribonucleic acid) carries the genetic information in your body’s cells. DNA is made up of four similar chemicals—adenine, thymine, cytosine, and guanine—which are called bases and abbreviated as A, T, C, and G. These bases are repeated over and over in pairs to make up your DNA. What Is a Gene?

What's in Your Genes? March 1, 2016 Breast Cancer. Part One of a Three-Part Series by Norma E. Roth. ... A close blood relative with a certain type of cancer can increase your own risk of the disease. It doesn't mean you will develop it, it's just one of many contributing factors. Other factors are lifestyle, diet, and environment.

## **What's in Your Genes? | SJRA**

Genes are made up of DNA. Some genes act as instructions to make molecules called proteins. However, many genes do not code for proteins. In humans, genes vary in size from a few hundred DNA bases to more than 2 million bases. The Human Genome Project estimated that humans have between 20,000 and 25,000 genes.

## **What is a gene? - Genetics Home Reference - NIH**

Genes are found on tiny spaghetti-like structures called chromosomes (say: KRO-moh-somes). And chromosomes are found inside cells. Your body is made of billions of cells. Cells are the very small units that make up all living things.

This analysis gives insight into how your genes may function, and lifestyle choices to reach your optimal health. It gives you the information you need, so you can prioritize certain nutrients, daily habits, and health targets; potentially identifying how gene polymorphisms, or gene variations, link to sleep, fitness, and mental energy and stamina.

## **What's in Your Gene SNP™ Blueprint? - nutraMetrix Blog**

Your chromosomes contain the blueprint for your body - your genes. Almost every cell in the human body contains a copy of this blueprint, mostly stored inside a special sac within the cell called the nucleus. Chromosomes are long strands of a chemical substance called deoxyribonucleic acid (DNA). A DNA strand looks like a twisted ladder.
